

Faculty Credentials System 2.0

The Faculty Credentials System 2.0 is a multi-user database system designed by a faculty member with over a decade of academic experience in community colleges, four-year schools, and universities. Exposure to numerous accreditation reviews contributed to the design of the system. A major goal in the design of the system was to develop a centralized application that would aggregate all faculty experiences, accomplishments, and other credentialing data in one user-friendly system. Key features of the system include:

- Inclusion of data categories considered essential for faculty credentialing by SACS and other accrediting agencies.
- Centralized storage of all faculty credentials: Education, Teaching Experience, Professional Experience, Presentations, Publications, Associations, Service, Certifications, Training, Accomplishments, Approved Courses.
- Faculty can generate updated CVs and resumes with a single click. Administrators can generate CVs and resumes for the entire faculty with a single click.
- Dropdown lists throughout the application reduce data entry.
- Copy and paste capability allows users to easily transfer data from other documents.
- Existing data can be imported from various formats: Word, Excel, Access, and various text delimited formats.
- Centralized database administration through a graphical user interface.
- Faculty access is controlled by the standard Network Login ID. When a user logs in to their computer, their Network Login ID is used to connect them to only their data. Administrators have access to all of the data.
- User adjustable columns and rows in the user interface.
- Microsoft Office compatible.
- No additional servers or other hardware required.
- Additional features and reports are possible upon request.
- Reasonably priced software service agreements are also available. They include free upgrades, four free hours a month of support, 50% discount in hourly rates, and a rapid response to user needs.

Accomplishment	Show
▶ Developed the Inventory Tracking and Management System: This database interfaces with the Standard Base Supply System (SBSS) and is used to assist logistics managers in maintaining proper inventory levels.	<input checked="" type="checkbox"/>
▶ Developed the Training Database System: This database system was developed for the 4th Supply Squadron at Seymour Johnson Air force Base to manage the training schedule and mandatory training classes for the 300 plus members.	<input checked="" type="checkbox"/>
▶ Developed the Personnel Management System: Developed for Brown's of Carolina, this multi-user system housed and managed over 600 employee records. Training completed, salary progression, and other personnel data is tracked by the system.	<input checked="" type="checkbox"/>
▶ Developed the Quality Assurance Tracking System: Developed for Case Farms, a poultry processing plant, the system is used to log chemical and biological tests to meet USDA standards. The system is capable of producing a variety of reports for management and USDA personnel.	<input checked="" type="checkbox"/>
